COVER: Membrane translocation of p47-phox. To evaluate translocation of p47-phox of PMNs in rat lung, the lungs were triple-stained with DAPI (blue, nuclear), WGA (green, membrane), and anti-p47-phox (red). Representative images of stained PMNs in a control lung (A), a collapsed lung (B), and a reexpanded lung (C) are shown. See Minamiya et al., pages 81–86, 2008.
